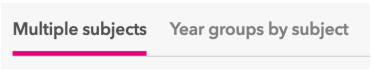
Subject dashboard: Multiple subjects report

What does the report show?

Alongside contextual & prior attainment information, this report provides estimates of individual pupil performance across three selected GCSE subjects (*default subjects: English Language, English Literature, Mathematics*). Teachers can then use all this information, in addition to their own knowledge of pupils, to help them set challenging yet realistic targets. As soon as the targets are entered, differences to estimates are calculated for each pupil, which will quickly identify those who may be in greater need of support. Aggregated year group or teaching group targets will also display within the chart, so that these can immediately be compared to their benchmark estimates.

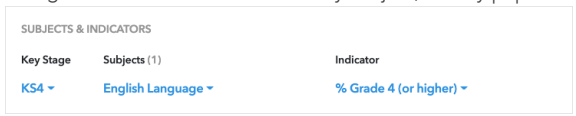
Navigation

The Multiple subjects report and Year group by subjects report currently make up the Subject dashboard. The default report in this dashboard is Multiple subjects and this is the one that your school targets are entered into. Click on a tab to change report.



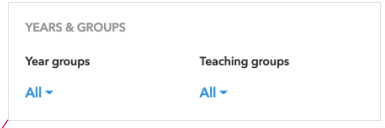
Subjects & indicators

Select up to three GCSE subjects and associated indicators. These do not have to be the subjects that students are currently taking. You can view estimates for any subject, for any pupil.



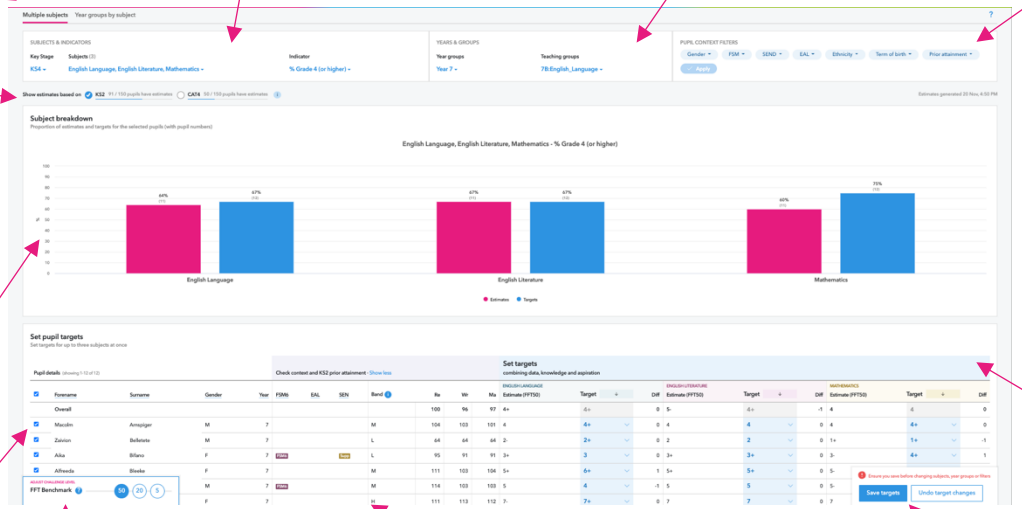
Years & Groups

Select your year group(s) and/ or teaching group(s) to view their benchmark estimates and set targets. Only pupils that have been assigned to a teaching group will appear within the report.



Estimate models

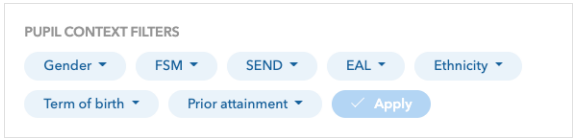
No national KS2 assessments in 2020 and 2021 has resulted in gaps in prior attainment. FFT have therefore provided multiple estimate options to select from, for each year group – KS1, KS2, CAT4. Click (i) to view the default models for each year group. Those are the models you will most likely have benchmark estimates for.



Pupil Context Filters

Recalculate the whole report for specific groups of pupils within the key stage, cohort(s), teaching group and subject.

The chart will provide an aggregated summary of both the estimates and targets based on the context of the filtered group(s). The pupils table will focus in on the individual pupils within the selected group(s).

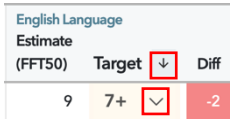


Subject breakdown

This section of the report shows your aggregated subject estimates against targets, based on the indicator that you have selected. Targets will be rolled up as soon as they are entered into the Pupils table beneath the chart.

View Estimates and set Targets

To set a pupil target, simply select the grade (9-1) from the drop-down list. You can also flood fill targets at a specific grade and then go back and review for individual pupils.



Pupil details

Cohort and teaching group lists are based on the information within your school's MIS. If the pupils or any of their details are incorrect, this will need to be revisited within the MIS. Once rectified, we will process any changes nightly and they will appear within your reports the very next day.

Challenge slider

Move the challenge slider to explore challenging and realistic benchmarks for the selected subjects. As the level of challenge increases from FFT50 to FFT20 to FFT5, the estimate values will increase.

Check context & prior attainment

Quickly identify FSM6, EAL, SEN Pupils. You can sort on these pupil factors to bring pupils with similar characteristics together and analyse their estimates & targets.

The prior attainment displayed will reflect your chosen estimate model. Click (i) to see how the associated bands have been derived.

Save targets

We will persist the targets as you enter them into this report. But you must click 'Save targets' before you leave, so we can aggregate them up within the School dashboard.
